

## INFORMATION SECURITY DURING SANCTIONS EPOCH

### LATEST OFFERS FROM RUSSIAN SOFTWARE AND HARDWARE ENGINEERS

The events of 2014 lead to the restrictions of importing a numbers of state-of-the-art technologies to our country. Such restrictions have not left aside IT –industry. Thus, the legal regulations of the United States made Microsoft, Oracle and Red Hat refuse from providing technical support to Russian in the sanctions list, Apple and Google had to block the access of Crimea citizens to their application stores.

Under such circumstances it has become clear that Russia had to achieve the technological independence. The Government of Russia set a task of import substitution as a priority. This assumes a significant increase in using Russian development.

AIM Systems is working closely with leading Russian hardware and software developers, and the company is in a position to offer its own information security solutions.

We have established the partnership with Anna, Ideco, VOCORD, InfoWatch, InfoTecs, Kripto-Pro, Security Code, Konfident, LAB PPS, Kaspersky Lab, S-Terra CSP, Cifrovye Technologii. Eleron, etc.
